

## Label Orientation & Offset Adjustment Cheat Sheet

Description: The contents within this document will guide all end users & print operators how to control and manipulate their artworks orientation and offset adjustment to ensure they are fully satisfied with how their artwork is being laid down on their media.

**Please Reference the Diagram Below as a Key**

### Left Adjustment

Increasing the left adjustment to a positive value will move the artwork toward the left edge of the media. Decreasing the left adjustment to a negative value will bring the media closer to the right edge of the media being printed on.

### Top Adjustment

Increasing the top adjustment will move the media toward the exiting side of the printer. Decreasing this number to a more negative value will move the artwork away from the exiting side of the printer.
