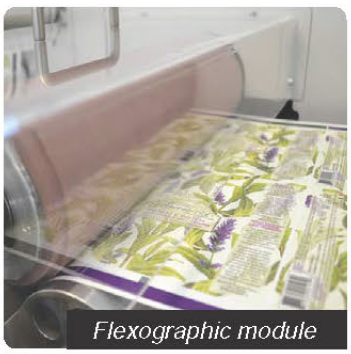
UV VARNISH MODULE FOR TAURUS AND ARIES

RoHS COMPLIANT CE

Higher level of finishing for your labels!

The UV varnish module is an accessory available for Taurus and Aries finishing systems; it is a flexographic unit equipped with an anylox cylinder capable of depositing 3.5 grams of varnish per square meter with a semi-gloss finishing (it is possible to order the anylox cylinder with customised finishing specifications).

Installed in-line to the finishing systems, the power of the UV lamp is automatically adjusted according to the laser cutting speed and when the media stops inside it, the protective shutter immediately intervenes.



Flexographic module

UV lamp

ULTRA PERFORMANCE

Easy to use, it allows an alternative media protection to the classic cold lamination to offer a superior finishing level.

TECHNICAL SPECIFICATIONS

MODEL	VRN25	VRN35
